

Mission Statement Environment

We want to be a leading global provider of sustainable mobility and a role model in environmental protection. To this end, we strive to systematically reduce the environmental impact along the life cycle of our products and services. Compliance with environmental regulations, standards and voluntary commitments is a basic prerequisite for our actions. We take economic and political developments into account for our goals and ambitions.

Fields of action

Contribution to climate protection

We align our climate action with recognized international frameworks, taking into account the requirements of the Paris Climate Agreement. The focus is on the electrification of products, the decarbonisation of value-added processes and the use of renewable energies.

Resource conservation

We pursue measures for the more efficient use of materials, energy and water, taking into account approaches to the recycling of resources. In addition, possibilities are being examined and implemented to reduce the use of primary raw materials through alternative materials and recycling concepts.

Protection of ecosystems

We consider the potential impact of our business activities on environmental media such as air, soil and water, as well as on biodiversity and ecosystems. To support these goals, appropriate management approaches and selected projects for the protection of natural habitats are being implemented.

Environmental Compliance

We operate effective environmental compliance management systems to systematically identify and manage environmental risks and opportunities related to products, services and business processes. The dialogue with relevant interest groups serves to include requirements and expectations in decision-making processes.
